Method and communication terminal for handling payment of downloadable content.

A B S T R A C T.

5 Content subject to payment is downloadable from a content provider to a wireless terminal via a communication network. A software application an in said wireless terminal is opened, the downloadable content is requested from the open software application. The terminal automatically starts up a network session, and transmits a request for downloading said downloadable content

10 for the software application. When the content provider replies to said request by sending the content, the wireless terminal receives said content for the software application for pre-study (pre-view, listning, feeling etc). Payment for said downloadable content for the software application for enabling storing of said downloadable content for the software application is

15 handled, whereby storing of said downloadable content for the software application from which the downloadable content becomes possible.
